## i365 EVault Data Protection

We ensure you never lose your data.  
Always available. Always secure. Always compliant.

# Never lose your data:

i365's EVault Data Protection gives you peace of mind.

i365's EVault Data Protection solutions are powered by the industry's only fully integrated data protection technology for both physical and virtual environments.

Our solutions scale seamlessly as your company grows, accommodating nearly any combination of network components, wherever they reside. Our disk-to-disk backups eliminate the hassles and unreliability of tapes.

**M**aking sure your data is always available is challenging. Resources are limited. Your data and systems keep growing. You deal with constant glitches and ever-more-stringent regulation. Maybe you're also hamstrung by unreliable, risky tape backup systems.

We eliminate those problems. Your backup and recovery become fast, secure, and compliant. i365's EVault data protection solutions let you back up and restore data quickly, and manage everything easily.

From a single office to a global enterprise, you choose the option that fits your business: Software-as-a-Service, software you own for granular control, or managed services. We make backups brilliantly simple.

## Take your choice: EVault fits your business

### Software-as-a-Service

**EVault SaaS** offers "set it and forget it" online backup and recovery for small-to-medium businesses that need easy-to-manage data protection.

**EVault SaaS Plus** is our customizable service for mid- to large-size businesses with larger data sets and more stringent compliance requirements.

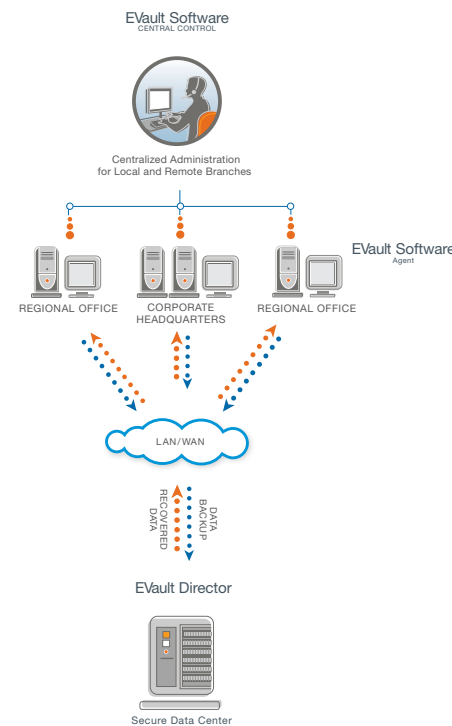

### EVault Managed Service

We provide an externally resourced online backup and recovery service for medium-to large-size businesses that require a high quality, data protection infrastructure managed by experts.

All three of our services offerings back up your data, fully encrypted, to one of our Tier III or IV data centers. Reliability and disaster recovery are built in.

### EVault Software: Advanced control

Our licensed software lets you easily meet regulatory requirements for data protection in nearly any environment. Back up and restore individual databases, mailboxes, and cluster nodes. You get easy replication capability, bandwidth throttling, role-based access, and complete centralized control from anywhere with Web access.

The EVault data protection process

i365's EVault Data Protection technology includes add-ons for additional disaster recovery protection, replication, archiving, compliant email storage, mobile device backup, and workspaces for business continuity documents.

## Powerful features make data protection complete and easy

### EVault DeltaPro™

Backs up only new and changed data, dramatically reducing storage footprint.

### Support for applications

Plug-ins protect Exchange, SQL Server, SharePoint, Cluster Services, Oracle.

### Support for VMware

Plug-in protects an entire virtual environment for fast disaster recovery.

### Web CentralControl

Configure, monitor, and manage backups from anywhere with Internet access.

### Regulatory compliance

Easily satisfy requirements of SOX, HIPAA, GLBA and others.

### Bandwidth Throttling and Adaptive Compression

Control bandwidth used for backups and adjust data compression on-the-fly.

### Open File Manager

Enables "hot" backups of files while they're in use.

### Deduplication

Eliminates duplicate data within backup jobs on the storage vault.

### Replication

Mirrors backup data to another vault assuring disaster recovery.

## Key Benefits

- Disk-to-disk reliability
- Automatic backups
- Fast restores
- Centralized management
- Easy regulatory compliance
- Broad platform support
- SAS-70 Level II vendor
- Expert help 24/7
